

EdiPax and the Pax Software Family; E-mail: info@edipax.com - <http://www.edipax.com>

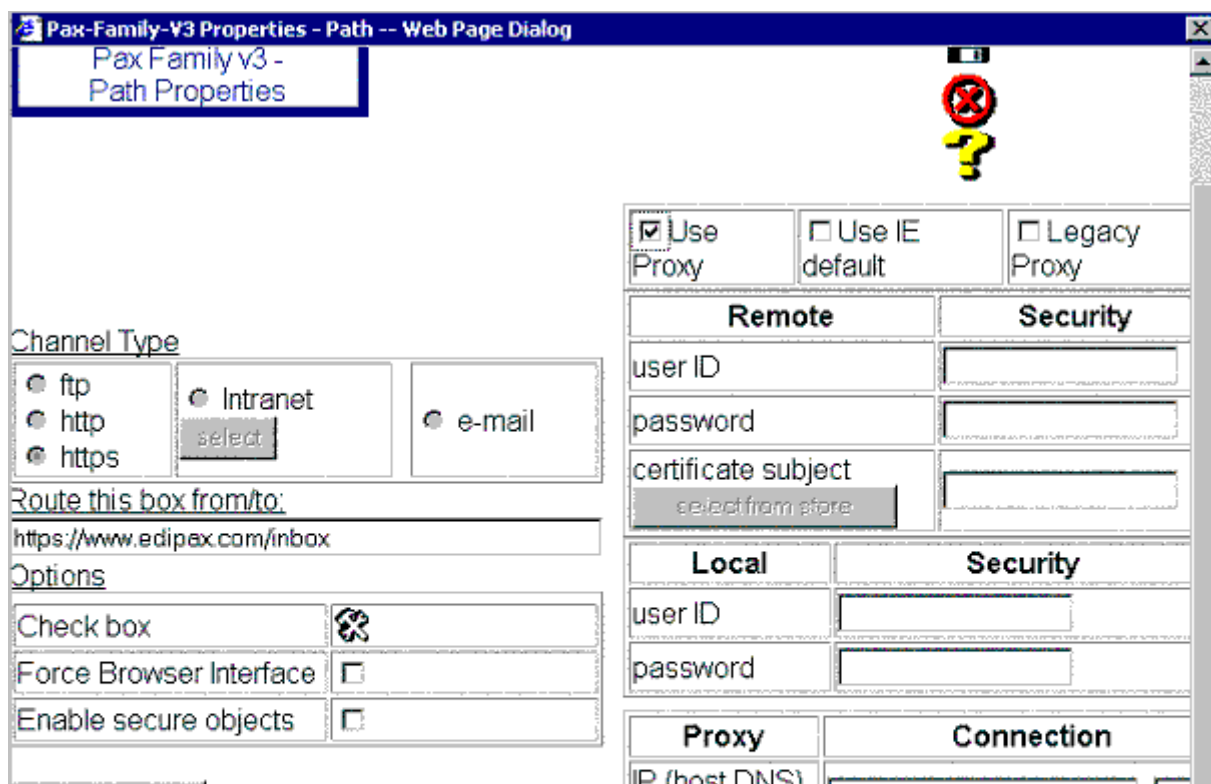

EdiPaxNC - Architecture

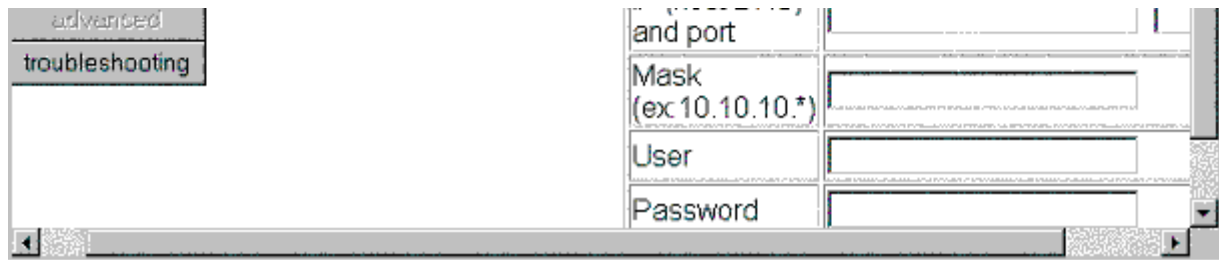

EdiPaxNC-v3 is a network administrators utility designed to automate document collection and distribution, through multichannel networks.

- Multiprotocol : SMTP, POP3, HTTP, FTP, HTTPS, WebDAV
- Use internal clock and sophisticated task scheduler
- Automate network activities like copy and/or email a file, pop a mailbox
 - Optimisation : select the most "cost efficient" channel first. Degrade to other channel(s) if not up and running.
 - Error management : downgrade to other channel(s) and/or notify administrator(s) on alert
 - Partner specific : input partner specific telecommunication preferences

EdiPaxNC - HTTP, FTP, SMTP, Pop3, intranet,...

Select the protocol to use to connect to distant nodes. Input certificate, proxy, userid, passwords and other required network parameters.

EdiPaxNC - Task Scheduler

Define tasks to be performed and time schedules. Task can be "copy a file" or "check for exist". Use this tool to spot network errors or check intranet security

Pax Family v3 - Task Manager Properties -- Web Page Dialog

Action

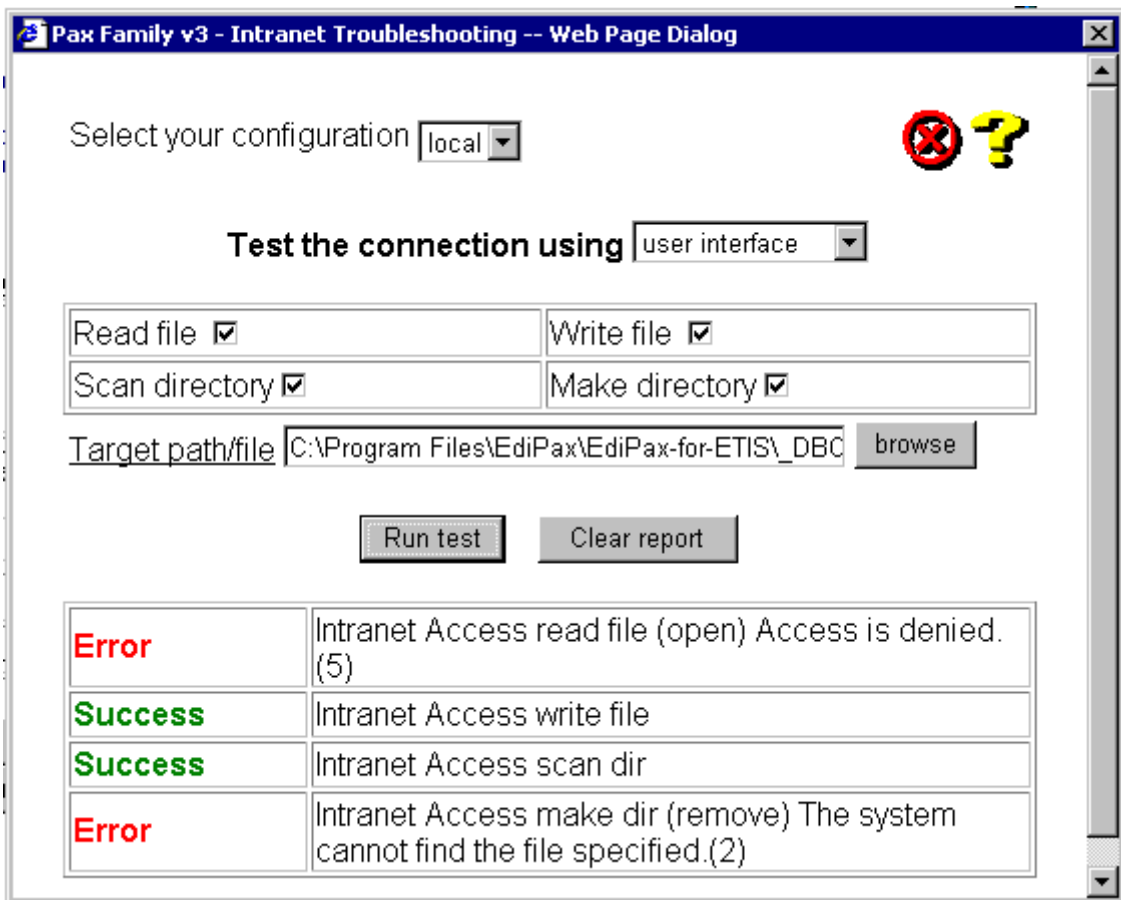

EdiPaxNC - MMC, trace, alerts

MMC interface - Activity logs and trace together with security and system diagnostics to network and security issues : "EdiPaxNC" is a productivity tool

EdiPaxNC - diagnostic

MMC interface - Channel settings diagnostic tools will help tuning telecommunication parameters.

EdiPaxNC - Partner Specific

Many partners ? Input partners' and relations' specific preferences.
